

Why?

- ↳ Maximise your AI potential (Best AI user)
- ↳ Reduce iterations
- ↳ cost efficiency
- ↳ Versatility.

Prompt Engineering

↳ To guide/communicate AI to produce desired output

Text to image
Input (Prompts) → Output

art to give clear and contextual input to AI tools

Principles of skills

- 1 Be specific and clear → about task, format
- 2 Use context → role, scenario, objectives
- 3 Constraint → put limit, tone, format
- 4 Iterate and refine
- 5 Leverage example.

Common pitfalls to avoid.

- 1 Vagueness → failing scope, to define format, can lead to unwanted outputs.
- 2 Overloading → too much information can confuse AI
- 3 Understanding AI limits and also understand AI tool capability.
- 4 Ignoring feedback.

How to become an expert?

- 1 Practice regularly.
 - ↳ Try new AI tool everyday
- 2 Learn from example
- 3 Stay updated (as per your field)
- 4 engage in communities

Advance Techniques

- 1 Chain of Thought → asking AI to provide step by step explanation.
- 2 Rule based Prompt → asking act like a "role" e.g. sales expert, fitness, marketer.
- 3 Zero-shot, one-shot, few-shot → giving examples.
 - no example ↓ giving 1 example
 - ↓ giving more than 2 example
- 4 Multi-turn conversations

Examples

- 1 Text summarization
- 2 Pdf → analytics
- 3 QA (Interview)
- 4 Information extraction
- 5 Code generation.
